

# IMPORTANT

## Installation

- This ZIP-archive is only one of two you'll need to fully install and use the demo-version of NEXUS. If you haven't downloaded the remaining ZIP-archive, please do so now before you continue with the installation.
- After you have downloaded both ZIP-archives, extract them to your HD. Make sure you have enough space on the destination drive.
- Please **don't delete** any of extracted contents after you installed the demo-version of NEXUS. The extracted folder "Nexus content" is still needed by the demo.
- Now proceed by installing the appropriate version (Windows or OSX). Follow the on-screen instructions until the installer finishes.
- After installation, upon the first start, the NEXUS demo will ask you to locate a single file on your hard-disc. This file is found in "location of the extracted ZIP/Nexus content/Samples/Rom".

## Limitations

- The NEXUS demo has a time-limit of 15 minutes, after which you need to re-start the demo. Otherwise the output gets muted. After the first five minutes the volume will drop to zero shortly every 30 seconds.
- You can't save any presets/songs with the NEXUS demo. The loaded song will revert back to the "Saw Init" preset.
- With certain hosts you can't "export" or "bounce" audio with the NEXUS demo. This is intended behavior and not a bug. With the full version "export" or "bounce" works.
- This demo does not support skins or expansions.
