

# UPGRADING

## **A short guide for people who are upgrading from NEXUS1 to NEXUS<sup>2</sup>**

- Download the latest update and the “Dance Vol.2” expansion.
- Simply run the latest setup you downloaded and import the “Dance Vol. 2” expansion you’ve downloaded previously.
- The “Dance Vol. 2” expansion also contains the three additional skins.
- All licenses for the “Dance Vol. 2” expansion and the three additional skins are built-in to NEXUS<sup>2</sup>, so you don’t need to supply them during import.
- You don’t need to create a second copy of the content on your hard-disk.
- NEXUS<sup>2</sup> uses the same content-folder as NEXUS1 and is 100% backwards compatible. That means that all licenses, expansions and skins simply work. There is no need to re-import anything.
- If you already created a second copy, simply remove the newer one, open your host, create a new, empty project and load one NEXUS<sup>2</sup> instance. Now wait for it to detect the correct location of the content.
- Please also read the “HowTo Expansion Import” PDF.
